Enterprise Fixed-Mobile Convergence to the Next Level

Make employee mobility an integral part of the corporate network using any mobile phone, any PBX/UC solution, and any wireless network.

True Convergence

Tango Networks™ Abrazo™ bridges the gap between the traditionally separate worlds of enterprise and mobile telephony, converging corporate communications into one seamless environment. Mobile users receive true PBX/UC services and functionality, while you have the same kind of control over mobile phones as you do your desk phones.

Leverage Current Investments

Any Mobile Phone

With Tango Abrazo, you don't have to upgrade employee phones to smartphones and/or dual-mode devices. Any mobile phone can take advantage of the powerful features of fixed-mobile convergence.

Any PBX

It doesn't matter if your PBX is TDM, IP, hybrid, if you have PBXs or

UC solutions from multiple vendors, or if your solutions are hosted by your service provider. The Abrazo supports all of the top solutions in the market.

Any Network

Customized enterprise voice policies and optimized routing decisions can be extended to your mobile workforce anytime, anyplace – regardless of whether the network is cellular or WiFi.

Policies are extended uniformly to all mobiles connected to the enterprise, giving you maximum control over mobile usage, accountability and access while maintaining sensitive enterprise information within network boundaries. All while allowing you to leverage your current investments.

Turn Mobility into a Valuable Corporate Asset

The number of mobile workers continues to skyrocket, creating a pressing need

to work in a more dynamic fashion. With the Abrazo, wherever employees may be working, their mobile phone becomes a true PBX/UC extension, with access to all corporate calling features and dialing plans. But Tango's enterprise mobility solution is about more than just technology. It's about:

- transforming your business processes
- improving your ability to respond and collaborate
- improving employee productivity
- simplifying service management
- lowering your mobile communications costs

Mobilizing your workforce with the Abrazo will help you realize productivity gains in less time, with simplified processes, and with fewer resources – ultimately improving your bottom line.

Tango Networks Abrazo

END-USER FEATURES

Intelligent Call Delivery

Incoming calls ring the user's desk phone, mobile phone and soft phone – the most convenient phone can be used to accept the call.

Single Number/Single Voicemail/Unified MWI

Only one phone number is needed to reach users - whenever, wherever. Message waiting indication in all locations alerts users to voice messages that can be retrieved from either phone. And, calls from either mobile or desk phones display the same Caller ID, keeping the user's location and mobile phone number private.

Seamless Mobility

Active calls can be seamlessly switched back and forth between a user's mobile and desk phone, enabling the user to begin a call on one phone and switch to another without interruption. In addition, calls can be seamlessly handed off between wireless networks without user intervention.

Multiple Mobile Personas

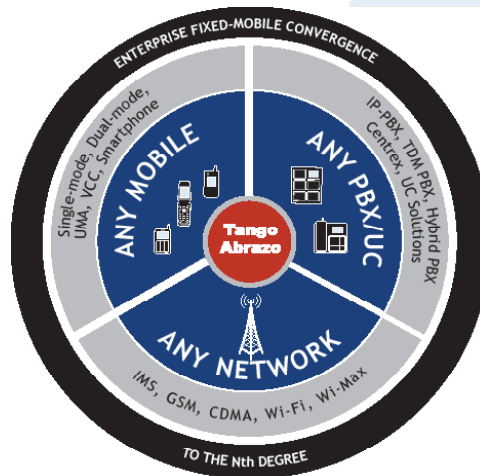

Allows for keeping business and personal calls separate via policy and/or on per-call basis.

Enterprise Dial Plan Support

Mobile workers can leverage the corporate dialing plan from anywhere, including 4- or 5- digit internal dialing and low-cost "on-net" international calls. And there's no need for users to update their mobile phone books or change the way they dial their contacts.

UC Presence and Location

If using a UC solution, presence and location information for the mobile phone can be published to the UC presence server, enhancing the UC experience and further improving productivity.

Tango Networks' Abrazo, the ultimate enterprise FMC solution, enables the enterprise to manage employee mobility.

Two phones.
One solution.
Let's Tango.

ENTERPRISE IT FEATURES

Optimized Routing

The Tango Networks Abrazo intelligently routes mobile-originated calls via the most cost-effective route for the enterprise's benefit. Calls can be routed via the enterprise's private network, eliminating costly long-distance charges, especially for international calling. Yet, in instances where mobile-to-mobile calling is the most cost-effective option available, the Abrazo intelligently routes the call while still enforcing policies and capturing call detail records.

Policy Enforcement

Policies are enforced in real-time on employee mobile phones, including types of allowed services, mobile personas, time-of-day/day-of-week provisions, and optional user-controlled policies.

Call Logging & Detail Records

The Abrazo's call logging capabilities allow the enterprise to manage mobile phones the same way you manage office phones by enabling you to deliver facilitated departmental chargeback, carrier billing reconciliation, and regulatory compliance.

Single Point of Administration

The Abrazo takes the pain out of administration by providing a single location for handling adds, moves, deletions and changes to the system.
